

**AMENDMENTS TO THE SPECIFICATION**

Please replace paragraph [0052] with the following paragraph:

[0052] In yet another embodiment, two separate reference magnets 810-811 are added to flow control device 800 ~~the valve 801~~ so that the orientation of the valve 801 and its corresponding magnetic indicator device 803 independently of the position of the reader. This second embodiment also works with separate embodiment of the reader. In alternate embodiment for the reader, the reader may utilize less magnetic sensors. The sensors would provide information regarding the general orientation of the detected magnetic fields. When the user orients the reader in this embodiment into a desired orientation aligned with the implanted flow control device, the setting of the valve 801 may be determined from the orientation of the magnetic fields observed from the magnetic indicator device 803 coupled to the valve 801.
